

CLAIM AMENDMENTS

Claim 1 (currently amended): An apparatus,
comprising:

5 a front shell member having a top portion with a rear edge portion, a left side portion attached to said top portion, a right side portion attached to said top portion, and a front portion attached to said top portion, left side portion and right side portion, each of said
10 left and right side portions of said front shell member has top, bottom, front and rear edge portions, said rear edge portion being greater in height than said front edge portion, said left and right side portions of said front shell member being tapered so that said top portion of
15 said front shell member slants downward from rear to front;

a transparent viewing window in said front shell member;

an opaque rear shell member having a top portion
20 with a front edge portion, a left side portion attached to said top portion, a right side portion attached to said top portion, and a rear portion attached to said top portion, left side portion and right side portion;
portion; and

25 an air inlet and an air outlet in said rear shell member; and

a hinge connecting said front and rear shell members along said rear edge portion of said front shell member and said front edge portion of said rear shell
30 member, said front shell member being movable between a closed position at which said front and rear shell members abut one another and an open position at which said left and right side portions of said front shell member are

spaced from said left and right side portions of said rear
35 shell members.

Claim 2 (original): An apparatus, as set forth
in claim 1, including a handhold attached to said front
shell member.

Claim 3 (original): An apparatus, as set forth
in claim 2, wherein said handhold is attached to said top
portion of said front shell member and said front portion
of said front shell member.

5

Claim 4 (original): An apparatus, as set forth
in claim 1, including a front rib extending along a bottom
edge of said front shell member.

Claim 5 (original): An apparatus, as set forth
in claim 1, including a rear rib extending along a bottom
edge of said rear shell member.

Claim 6 (original): An apparatus, as set forth
in claim 1, including a front rib extending along a bottom
edge of said front shell member and a rear rib extending
along a bottom edge of rear shell member, said rear rib
5 having a larger height and width than said front rib.

Claims 7-13 (canceled):

Claim 14 (new--previously presented in substantially
same form as the second claim numbered 13) A lid for a cold
box, comprising:

a transparent front shell member having a top portion
with a rear edge portion, a left side portion attached to said

top portion, a right side portion attached to said top portion, and a front portion attached to said top portion, left side portion and right side portion, said left and right side portions being tapered so that said front shell member slants downward from rear to front;

an opaque rear shell member having an air inlet and an air outlet, a top portion with a front edge portion, a left side portion attached to said top portion, a right side portion attached to said top portion, and a rear portion attached to said top portion, left side portion and right side portion, said front and rear shell members being hingedly connected along said rear edge portion of said front shell member and said front edge portion of said rear shell member;

a front reinforcing rib extending along a bottom edge of said front shell member and a rear reinforcing rib extending along a bottom edge of rear shell member; and

a handhold attached to said front shell member.
